

C90 - A NEW GENERATION MOVABLE PREMISES FOR SCHOOLS AND DAYCARE

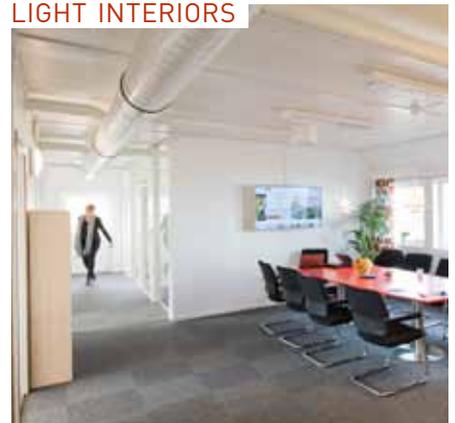

RENTING FOR THE FUTURE

MODERN MATERIALS

LIGHT INTERIORS

The requirements for premises today are anything but small – and rightly so. Today we know how important a good environment is for well-being and productivity. A working environment of the highest class increases opportunities for both teaching and businesses to achieve their goals. For schools and daycares, environment is important – it lays the foundation for lifelong learning.

Renting modular space that inspire the employees of a company or the pupils in a school can therefore be summed up in four words – renting for the future.

QUALITY IN FOCUS

To meet the very highest requirements for premises, we have developed the C90 modular system. This is for those who seek the best – modern technology, functional solutions and well-thought-out design mean that these are in the top class on the market. When we developed C90, our idea was that modular space should not just be as good as permanent buildings – they should be better.

The C90 system gives you freedom. These premises have almost unlimited possibilities for adaptation. You get new and modern solutions for premises that meet today's requirements, many times better and more suitable for their purpose than their predecessors. C90 is therefore equally suitable for offices, schools and daycare.

“ MODULAR SPACE MADE UP OF C90 MODULES ARE CHARACTERISED BY MODERN DESIGN IN WHICH FUNCTION, WORKING ENVIRONMENT AND ENERGY CONSUMPTION HAVE BEEN THE GUIDING PRINCIPLES OF DEVELOPMENT WORK.

C90 IN BRIEF

- 1-3 floors
 - well thought out and functional
 - space efficient
 - energy efficient
 - quiet
-

CE MARKING: EXTRA SECURITY

C90 offers extra security because it is CE marked. That means it follows the latest European regulations on health, safety, function and environment.

MODERN FEEL WITH INTERNATIONAL STANDARDS

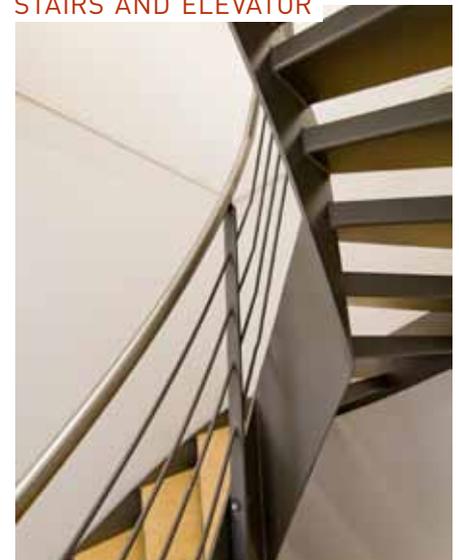

The C90 system meets high international standards. These premises have a stylish exterior with granite grey façade units of a stone material and generous windows. They fit equally well in city environments of classic architecture or in green parkland. An exterior that suits its surroundings is more important than many think – as well as being functional, it is important for the exterior to send out the right signals. The borderline between modular space and permanent buildings is erased.

LET YOUR ORGANISATION REACH NEW HEIGHTS

Building upwards makes efficient use of space, an idea that we grasped when developing C90. The premises can be built up to three floors high, which mean they achieve the maximum size, even on a limited site. This enables you to place them right up to your existing buildings, maintaining nearness to other parts of the organisation.

C90 has also been developed for even more efficient handling in assembly and dismantling. This reduces both costs and delivery times, because we can complete the premises you rent faster.

STAIRS AND ELEVATOR

WHERE NEW TECHNOLOGY AND MODERN DESIGN ARE UNITED

Take a look at C90 - the next generation of modular space, signed Cramo Adapteo.

WORKING ENVIRONMENT

With C90, you get an inviting working environment of the highest class. The premises offer freedom and flexibility, because you have many opportunities to adapt the interior. Layout and functions are tailored down to the smallest detail. The working environment is light and quiet. Sound absorbing ceilings dampen disturbing noise, while generous windows and customised lighting give optimum light levels and a great deal of natural light.

C90 is also one of the few systems on the market with the CE mark. This mark gives you extra security because it certifies that the premises fulfil the latest European regulations for health, safety, function and environment. C90 has been designed, manufactured and controlled in accordance with the CE mark regulations. The static calculations and fire safety design (REI 60) of the C90 modular system allow for buildings up to three storeys high.

INNOVATION, TECHNOLOGY AND ENERGY

C90 gives you premises with the best in technology and innovation. The system is energy efficient in the real meaning of the concept. High quality, multi layer insulation and heat exchangers mean that these premises use no more energy than the latest new buildings. This can be complemented with energy-saving functions such as lighting controlled by motion sensors.

All windows have sun-protection glass, and the (optional) air conditioning combined with functional sun screening means you can achieve the best interior climate possible during the warmer times of the year.

C90 can be heated directly with electricity or with radiators. A water-based radiator system is especially suitable for organisations with an environmental profile, since it can give more sustainable use of energy. A water-based radiator system enables the use of energy sources such as district heating, pellets, air/water heat pumps etc.

INTERIOR, EXTERIOR AND DESIGN

A good interior speaks for itself – it creates well-being and can help to position an organisation or a specific approach or form of teaching. With C90, you get the most innovative the market has to offer. This means modern design with well-thought-out choices – smartly concealed installations, light colours with contrasting door frames and many options.

The exterior is also significant. C90 has generous windows that make the building pleasant to look at and let in plenty of natural light. The granite grey façade fits into any surroundings and gives an impression of exclusivity.

THE STATIC CALCULATIONS AND FIRE SAFETY DESIGN OF C90 ALLOW FOR BUILDINGS UP TO THREE STOREYS HIGH.

SPACE TO GROW AND DEVELOP IN

Schools and preschools are always full of activity. It is therefore important that the working environment functions at all times and is suited to the unique needs of the organisation.

SCHOOL AND WORKING ENVIRONMENT

C90 has been built to provide a quiet, functional and inviting environment. Functions can be adapted to your needs, down to the smallest detail. Sound absorbing ceilings and smartly designed spaces for installations like cables and pipes reduce reverberation time and contribute to very quiet premises. Project-designed ventilation – with or without air conditioning – gives a comfortable interior climate even when the temperature outside is high. C90 is CE marked, which gives you extra security.

TECHNOLOGY AND ENVIRONMENT

The thick, multi-layer insulation in walls, floors and ceilings minimises energy costs, which can be half that of other modular systems. It also contributes to effective noise reduction. Heating can be either with traditional, thermostat-controlled electric heaters or using a water-based radiator system connected to any appropriate heating source.

All the technical devices are placed in the technical module. This has a ventilation unit that gives ample ventilation for two classrooms or two preschool departments, totalling about 60 persons.

The basic design of this module also includes 2-4 WCs including one to handicap WC standard. Connected to the technical module is a changing room for preschools, kitchen/kitchenette and space for storage and cleaning equipment. The entrance has plenty of room for drying cabinets, cloakroom fittings and anything else that will help things to run smoothly.

LAYOUTS

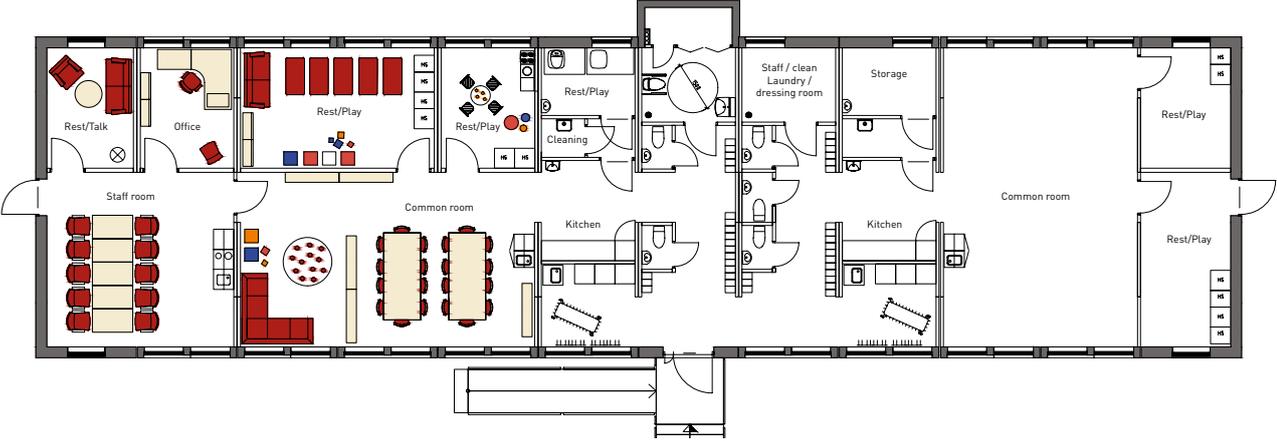

There is great flexibility thanks to the many possible layouts. The choice is yours – for schools you can choose classrooms from 50 to 65 square metres. The classrooms share a common corridor, which makes it easy to move around indoors throughout the premises. Other rooms you can choose include workplaces for teachers and educators, activity rooms, group and meeting rooms, rest rooms, changing rooms with showers, storage rooms and much else.

The illustrations give some idea of the layouts we can offer, but there are many more. Contact us today and tell us what you need – we will do the rest.

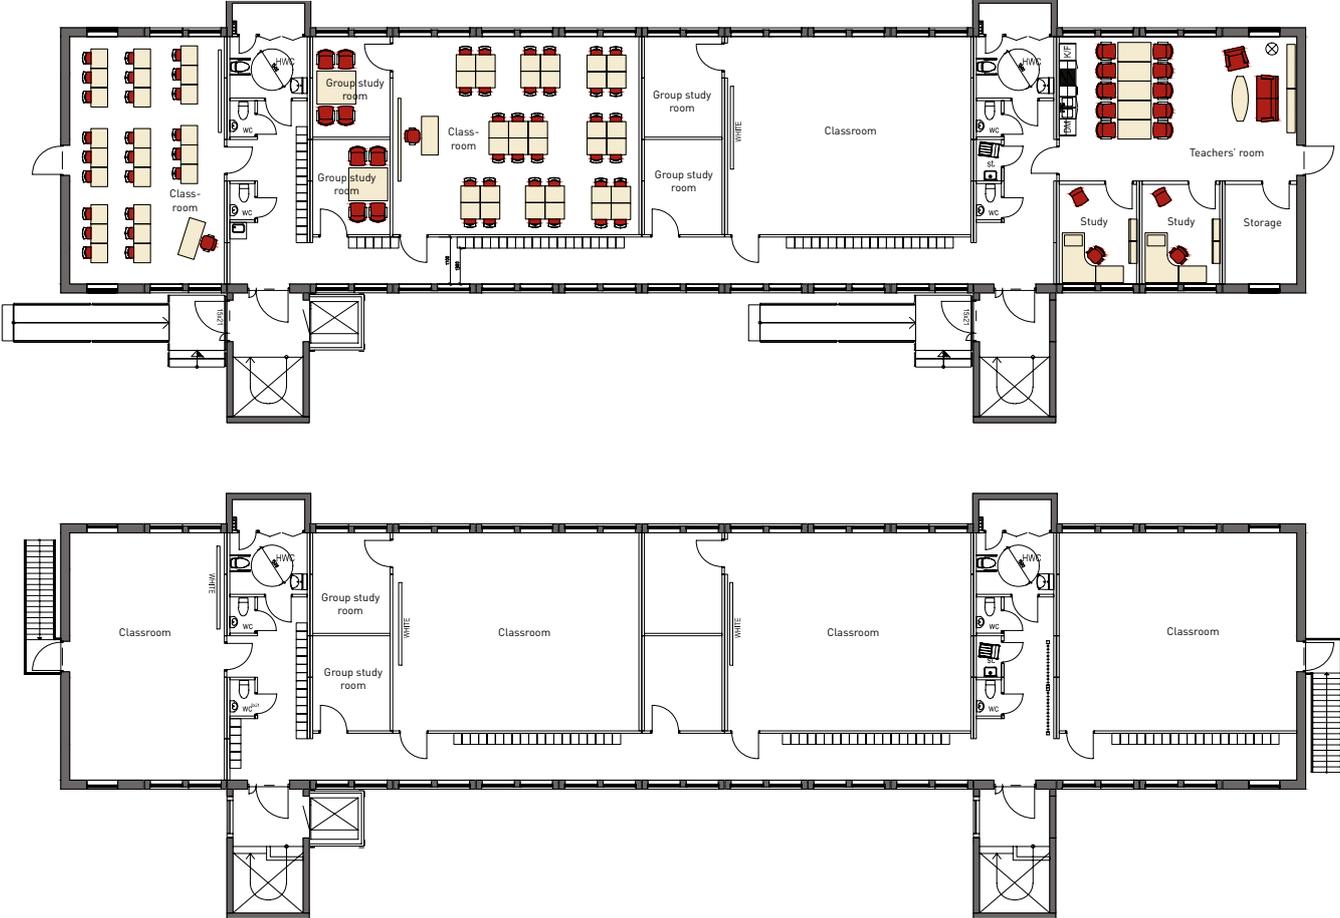

KITCHENS

We offer professional catering solutions that can easily be integrated with C90. Contact us to find out more.
